

i1 Consulting

IT digital logistics solutions

About Us

01

15+ years of work
experience

02

100+ employees

03

25+ regular customers

04

20 + certified consultants

- ✓ **Automatization of logistics**
- ✓ **Business consulting**
- ✓ **SAP consulting**
- ✓ **Software development**
- ✓ **Mobile applications**
- ✓ **Training**
- ✓ **Support**

Projects

✓ Cargo Transportation and Logistics

✓ Agribusiness

✓ Retail

M.VideoEldorado

MIRATORG

✓ Banking direction

Projects

✓ Industrial manufacturing, Oil, Gas and Energy

Transportation management system

- Increase **efficiency** when interacting with partners
- Creation and implementation of **infrastructure model** for transport logistic
- **Cut** operational costs
- Centralized **approach to development** transportation, warehouse and yard management
- Operational and transparent **execution control** in the unified system

Architectural features of the solution:

1 You chose the solution:

SaaS or On-Premise

2 Comprehensive adaptation:

versatile choice of functions

3 System support and development:

regular rolling out of new releases and software improvements

4 Support Portal:

24/7 support portal for ITV platform

Transportation Management execution flow

➤ **Transportation Requirement**

Order-based Transportation Requirement
Automatically created

➤ **Planning**

Manual or automatic transport orders creation using mathematical model

➤ **Driver Management**

Placing driver to a transportation order in the system

➤ **Execution**

Transportation order tracking changes via geolocation services, manually or from adjacent systems

➤ **Charge management**

Automatic calculation of transportation costs, billing, creating of payment documents under the contract in accordance with the terms, inputted into the system

Transport requirement

ENTRANCE

- Document-based automatically, using integrated flows from any adjacent systems
- Based on external systems
- Excel
- Manually (ability to use a template)

Transportation Management

EXIT

- Delivery windows
- Location (coordinates)
- Production
- Priority

The image shows a screenshot of the Russian railway website (rosyaz.info). The top part displays a list of trains, with columns for direction, train number, type, status, and arrival/departure times. A specific train, 043, is highlighted in pink. Below this, a detailed view of the train's motion data is shown, including a map and a table of stations and arrival/departure times.

Charge management

Calculation of the cost of transportation

Advantages:

- Transparent scheme for calculating transportation costs
- Wide range of tools for flexible adjustment of cost calculation logic
- Integrated transportation and billing management
- Partial invoicing capability
- Integration of financial indicators
